

Environmental Policy

Velocity Air provides a comprehensive range of HVAC services that include Design, Installation, Maintenance, Service & Repair, including Projects.

Velocity Air fully accepts its responsibility as a quality air conditioning company to protect the environment in all its business activities by adopting best practice industry standards and guidelines.

This is achieved through our Environmental Management System that meets the requirements of ISO 14001 and ensures our business processes are carefully monitored, measured and controlled to promote a continual improvement in our environmental performance.

Velocity Air is also committed to compliance with environmental legislation and the protection of the environment. We will apply best practice environmental standards and guidelines promoted by the air conditioning industry to support and fulfil our compliance obligations.

In addition to the above commitments, we also recognise and commit to managing other key priorities for reducing and mitigating our environmental impacts are:

- The prevention of pollution, particularly emissions to the atmosphere, which may lead to the detrimental effects of global warming and ozone layer depletion.
- The promotion of energy efficiency initiatives that reduce greenhouse gas emissions and preserve natural resources.
- The minimisation of waste to landfill through the adoption of the waste hierarchy: ELIMINATE, REDUCE, REUSE and RECYCLE.
- The raising of environmental awareness with personnel, clients, suppliers and other interested parties involved in our business activities through ongoing communication, consultation, education and training.
- The implementation and maintenance of emergency response plans to report, record and mitigate the effects of any accidental environmental incidents.
- Committed to continuously improve EMS management by setting EMS objectives, plans and performance measures and regularly reviewing progress against the targets set.

This policy is reviewed periodically at our management review meetings to incorporate any changes to our environmental impact created by new or revised business activities. It is also the basis for our annual environmental objectives that are communicated to all staff to promote both their involvement and commitment to the improvement of our business with the aim of continual improvement of the environmental management system to enhance environmental performance.
